RESEARCH STATEMENT

My research investigates how AI-mediated systems shape group dynamics and social influence beyond the individual level. Drawing on social psychological theories, I understand, design, and empirically study interactive AI systems that intervene in group processes to enhance collective intelligence, improve decision-making quality, and foster creative collaboration.

I advance the concept of Group-Centered AI, reframing user experience as collective and emergent rather than an aggregation of individual interactions. AI has the potential to fundamentally reshape social dynamics, and understanding this influence can enable the design of group processes that foster greater inclusivity, diversity, and systems-level thinking. My work aims to inform responsible AI systems that influence groups transparently and ethically while preserving critical thinking and agency.
